

HALQA

Meeting Brief — Akif Saeed (SECP Chairman), 23 Jul 2026 · 2026-07-13 · prepared for the chairman

Halqa — Complete Meeting Brief: Akif Saeed (Chairman, SECP) · 23 Jul 2026, 09:30

- > The full picture. §0–§1 are your opener; §4 (legal) and §5 (anti-default) are
- > what he'll press on; §14–§15 are the roadmaps. Everything is honesty-first —
- > you're meeting the *regulator*. Every legal/licensing claim is sourced (links
- > in §4, §14, §15). Model as it stands: **record-only — no vault, no deposits, no
- > custody, no bank partner.** Anti-default = turn-position + tenure + legal +
- > reputation + verification incentives.

o. WHO YOU'RE MEETING — AND HOW TO PLAY IT (*read twice*)

Akif Saeed = sitting Chairman of the SECP (the securities regulator). Ex-SECP

Commissioner (Securities Market), ex-ADB, ex-American Express corporate banking.

He knows the NBFC / EMI / AMC / collective-investment regimes cold.

1. **Mentorship, not a pitch.** He won't invest. The prize is his guidance,

credibility, and a regulatory pathway (the sandbox — §3, §15).

2. **Never bluff licensing.** Credibility = knowing exactly why you need no licence

today and what would trigger one. Candour wins him; spin loses him instantly.

3. **Lead on his stated concern:** default risk + fraud/consumer-protection. He

wrote "if the default aspect is addressed there's a lot of potential."

4. **The landmine — the investment layer** (idle funds → T-bills/Sukuk/funds). That is *securities in his exact domain* and is explicitly an NBFC "Investment Finance Services" licensed activity (§15). Do NOT present it as live — it's a licensed-future product you'd want his guidance to structure. Lead with the *record-only committee + anti-default engine + portable credit record*.

1. THE 15–20 MINUTE TALK TRACK

1. **What it is (30s):** "Halqa digitises Pakistan's committee/ROSCA system as a **record-only** platform — we never touch the money. We record it, schedule it, protect it against default."

2. **The problem in his frame (1–2m):** committees run on *social collateral*.

Two killers: **operator runs off** (Karachi Rs 400m; Indian chit funds) and **early recipient stops paying**. Halqa kills both.

3. **Kill fraud → no custody (1m):** money moves member-to-member; we only record it on a double-entry ledger. **No central pool to steal** — the root cause of every mass committee fraud, removed. (Also why we need no EMI licence.)

4. **Kill default (4–5m — the heart, §5):** turn-position-as-collateral → new-member quarantine → earned graduation → auto-collection → verification incentives (cheque/salary) → mutual PG + undertaking → reputation + credit record.

5. **Licence position, proactively honest (1–2m):** "We deliberately stay a facilitator — no funds held, no lending, no pooling — so we sit outside EMI and NBFC. I'd rather learn the exact lines from you than trip over them."

6. **The ask (1m):** the SECP Regulatory Sandbox (§3, §15).

7. **Close:** "What would you need to see before you'd consider this credible enough to pilot?"

2. CORRECTIONS TO YOUR OLD LINKEDIN ANSWERS (*the model changed — stay consistent*)

- ❌ "Graduated security deposits" + "payout hold-back" → **removed** (they implied pseudo-custody). Defence is now **turn-position quarantine**.
- ❌ "Credit-weighted ordering" → **new-member quarantine to late turns** until 2 clean circles + verification.
- ❌ "Vault auto-covers a missed installment" → **vault removed**.
- ⚠️ "5% of the profit on idle money" → **drop this with him** — sounds like an AMC fee. Say "small service fees today; any yield-share is a licensed-future question."
- ⚠️ "Investment layer" → de-emphasise (§0, §15).

3. QUESTIONS TO ASK *HIM* — with *why* you're asking each

(He's the regulator. Good questions show you understand the rules and respect his role. Each one below has the plain reason you're asking it.)

1. **The sandbox — lead with this.** Ask: "Sir, SECP's Regulatory Sandbox has run cohorts — is there one a pre-revenue platform like Halqa could apply to, to pilot legally under supervision?" *Why*: this is the single most valuable thing he can open for you — a legal way to test with real users before you have any licence. Its rules even allow **unregistered start-ups intending to register** (that's you).

2. **Where the licence line is.** Ask: "At what exact point does a record-only committee platform cross into needing an **NBFC or EMI** licence — is it holding funds, promising a return, or the pooling itself?" *Why*: you want *him* to draw the line so you never cross it by accident. Shows you know the regimes exist.

3. **The investment layer.** *Ask:* "If idle committee funds were ever placed into T-bills or Sukuk, is that squarely ****Investment Finance / a collective investment scheme**** needing an NBFC licence — and is there any lighter compliant path?"

Why: this is the riskiest part of your idea in his domain — asking shows maturity, and his answer tells you whether that feature is worth pursuing.

4. **Credit bureaus.** *Ask:* "Is there any route for a non-financial platform to read from or report to **eCIB / a credit bureau** without first becoming a licensed institution?" *Why:* the bureau "life sentence" is your strongest deterrent — you want to know the real path to it.

5. **Consumer protection.** *Ask:* "Given the Karachi Rs 400m and the chit-fund frauds, what **safeguards would SECP want hard-coded** before a platform like this touches real users at scale?" *Why:* it signals you care about protecting users (his core mandate) and invites him to shape your product — the fastest way to earn his backing.

6. **Insurance.** *Ask:* "Would a **takaful default-cover** product need its own arrangement, or could it ride a partner's licence?" *Why:* he raised insurance himself on LinkedIn — following up shows you listened.

7. **The humble closer.** *Ask:* "What would you need to see from a model like this before you'd consider it credible enough to pilot?" *Why:* it turns him into your mentor and gives you a concrete to-do list to come back with.

4. LEGAL — PG, UNDERTAKING, JAIL & ASSETS (*verified; he'll test it*)

Instruments built:

- **Undertaking (iqarnama):** a weekly, e-signed promise-to-pay a definite sum.
- **Mutual personal guarantee (PG):** every member guarantees every other member —

runs member↔member, **never to Halqa** (so Halqa never becomes a lender). A

circle can't start until all PGs are signed.

- **Arbitration clause:** expedited private route; an award enforces as a decree.
- **Guarantee cheque (optional):** a member may lodge a physical cheque (§6) — the

only thing that arms the criminal §489-F route.

Jail? — Essentially NO. Say this right or he'll catch you.

- Pakistan does **not** imprison for a plain civil debt. A PG/undertaking default is

civil. Signing them ≠ "default → prison."

- The **only** criminal/jail route is **§489-F PPC — a dishonoured cheque** issued

to repay an obligation (up to **3 years**). It exists in Halqa only as the

optional guarantee-cheque tier — most members won't have one. And even §489-F is

punishment only: the source states "recovery cannot be made through this

process." [ppc-489-F](<https://pakarbiter.com/laws-in-pakistan/pakistan-penal-code-1860/ppc-section-489-f/>) · [scope](<https://courtingthelaw.com/2022/06/26/commentary/guest-columnists/section-489-f-ppc-object-scope-trial/>)

- §420 PPC (cheating) needs *proven deception up front* — not inability to pay.
- **Credible line:** "We don't rely on jail. We rely on making unproven members

take late turns where they can't default, a fast civil-recovery path, an optional

cheque tier, and a permanent reputational cost."

Assets? — Yes, but only after a court decree.

- The undertaking (written promise, fixed sum) + PG (guarantee) qualify for ****Order**

XXXVII CPC — the summary suit** (covers "a debt or liquidated demand from a

written contract or a guarantee"). Defendant has **10 days** to seek leave to

defend; if refused → **decree executable forthwith** → ****attachment & sale of**

assets.** [Order XXXVII CPC](<https://pakistankanoon.com/statutes/cpc/o-xxxvii/>)

- You cannot self-seize or take "everything" — decree amount only, some assets

exempt. **Timeline:** months if uncontested; longer if fought.

Honesty flags: undertaking/PG are **lawyer-unreviewed drafts** (must be papered by a banking lawyer); and with no collateral held, enforcement today = the signed instruments + reputation + the fact unproven members can't take early money at all.

5. THE FULL ANTI-DEFAULT SYSTEM (*the heart — his #1 concern*)

Core insight: default is an *early-turn* problem — whoever collects the pot in round 2 of 20 still owes 18 installments and can run; the last seats are *owed* money and cannot. Every layer targets the early seats.

A · Position is the collateral (prevention, needs no custody):

1. **New-member quarantine** — a new member, *whatever their score*, may only take one of the **last turns** of a public circle. A late-turn taker pays in every period before they ever collect, so their loss to the group is **zero**.

2. **Earned graduation** — early turns unlock only after **2 clean completed circles + manual verification** ("calling around"). Trust is earned (the Money Fellows model). Invite-only circles bypass the quarantine — the host is vouching (the social collateral you and Akif both value).

3. **Reliability score (300–850) + bands** — an ongoing signal; risky bands stay restricted even after graduating.

B · Make missing hard:

4. **Auto-collection / auto-debit (\$7)** — unconfigurable; pulls on the due date from the linked account, mandate-OTP confirmed. Balance reminders 3 days + 1 day out.

5. **Verification incentives (\$6)** — salary-account link, income+employer proof, or a guarantee cheque lower a member's risk and their fees.

C · Legal deterrence (signed before money moves):

6. **Weekly e-signed undertaking + mutual member-to-member PG** → Order XXXVII

fast-track + arbitration (§4).

D · Punishment + recovery:

7. Tightened grace, day-1 score damage, MISSED → ban → **RecoveryCase** opened.

8. **Family / linked-account withholding** — an account linked to a defaulter (referral / shared device / guarantor) can't join and has payouts withheld until cleared.

9. **Platform-wide CNIC blacklist** + a paid rehabilitation path.

E · The portable consequence:

10. Every miss stains the **reliability score** and (future) is queued for bureau reporting (§14) — default stops being free.

The number (say: simulation, not live): a 100,000-member Pakistan-calibrated sim cut post-payout default ~1.4% → ~0.3% and recovered ~85% of exposure vs ~0% in a paper committee.

6. **VERIFICATION & DISCOUNTS — the employer / income / cheque system**

A member lowers their own risk by proving reliability, and earns a **discount on Halqa's service charges** (largest applies — they don't stack). All recorded, never held.

Proof	Discount	Why it lowers risk
Guarantee cheque on file	95% off	A physical cheque arms the §489-F criminal route — the strongest deterrent. Collected in person by an agent (that physicality is the point).
Income slip + employer verified	80% off	Certain, traceable income; employer confirms the person and their pay.
Salary account linked	20% off	Auto-collection from a salary account is the most certain collection there is (Money Fellows steer).

- **Employer/employee angle (what he'll ask about):** verified employment is both a

discount driver *and* the on-ramp to **employer payroll deduction** (§17) — the ultimate collection shield where the employer deducts the installment before paying salary. That's the Money Fellows corporate channel; it's on our roadmap once an employer partner signs.

- All of this is a **pricing lever**, not custody — it keeps the record-only structure intact.

7. AUTO-COLLECTION / AUTO-DEBIT

- **Unconfigurable by design:** every circle collects automatically from the member's linked account on the due date — no manual payments to forget. Consent is clause 4 of the signed undertaking.
- **Mandate confirmed by OTP** (WhatsApp/SMS rail; sandbox today) when the account is linked; a WhatsApp receipt is issued for every collection.
- **Balance reminders** 3 days out ("keep Rs X available") and the day before.
- **Stage note:** the *scheduling, mandate, receipts and reminders* are functional in-app; the **real bank pull** needs a payment-rail partner (Raast/aggregator) — a licensed-stage upgrade. Today the member confirms/records the transfer.

8. SIGNUP & SECURITY (identity + account protection)

- **7-step signup:** phone → **phone-OTP verification** → name → address/city/occupation(+employer) → email → **CNIC (with camera scan)** → linked collection account → password → **app PIN** → review.
- **CNIC camera capture** (scan the whole card, Oraan-style) + manual fallback; NADRA Verisys is a licensed-stage upgrade.
- **App PIN on every open** (even inside a valid session) + **optional

fingerprint/biometric** unlock (WebAuthn; private key never leaves the device).

- **Account security:** bcrypt passwords, logout after repeated failures, JWT + refresh-token rotation with reuse detection, single-use rate-capped OTP, IP rate limiting, CSP/Helmet + HSTS.

- **PCI discipline:** card linking stores only brand/last-4/expiry — never the full number or CVC.

9. HOW HALQA WORKS + THE THREE ROLES

- **Committee = fixed group** (e.g. 10 × Rs 5,000/mo). Each period all contribute; one member gets the whole pot; rotation until all have received once.

- **Halqa's three internal roles:** the **Ledger** (double-entry record of every rupee), the **Treasury** (schedules turns, timelines, liquidity), the **Credit Bureau** (builds each member's reliability record).

- **Stack:** TypeScript throughout — Node/Express/Prisma/PostgreSQL API, React/Vite web, Vercel + Supabase. Live at halqa-seven.vercel.app.

10. CURRENT FEATURE INVENTORY

Onboarding (OTP + CNIC scan + PIN + biometric) · committees (create, discover open now / next cycle, tenure-gated turn pick, host controls, fund-the-gap) · **turn marketplace (**buy/sell future turns, band-gated**) · turn pricing** (early fee → late bonus) · reliability score + bands · **verification discounts** (cheque/income/salary) · auto-collection + WhatsApp receipts · mutual PG + weekly undertaking · family-linkage withholding · CNIC blacklist + recovery cases · group chat · Rafa AI guide · Urdu · full legal corpus. *(Removed/dormant: vault, deposits, hold-back,

profit "engines", Credit Passport.)*

11. TURN MARKETPLACE + TURN PRICING

- **Marketplace:** a member can list a future turn for sale at a premium; other members bid; the premium is capped ($\leq 50\%$ of the payout); a platform fee (10% of the premium) is Halqa's cut. Band-gated — the riskiest members can't buy into early seats.

- **Turn pricing:** circles can price turns on a spectrum — early seats pay a declining fee that flows to later seats as a bonus ("the price of liquidity", exactly what Oraan and Money Fellows do). Shown on every committee card.

12. REVENUE MODEL (*keep it simple and honest with him*)

- **Today (record-only):** modest **service/booking fees** on turns (with the verification discounts above), and the **turn-marketplace fee** (10% of premium).

No custody fee, no interest, no yield-share.

- **Future (licensed / partnered):** merchant commission on asset committees (§17), employer B2B SaaS, and — only under a proper AMC/CIS structure — a yield share on invested pools. **Do not pitch the yield-share to him as live.**

13. CYBERSECURITY / FRAUD / ANTI-PONZI (*regulators care most here*)

- **No custody** → kills the operator-runs-off fraud (the Karachi/chit-fund root cause).

- **Double-entry ledger + immutable audit log** → every rupee traceable.
- **No guaranteed returns, no central pool** → structurally *not* a Ponzi; the

opposite of the opaque single-managed schemes that collapsed.

- Full engineering security stack per §8; harmful-scheme guards (premium caps, no pyramid/referral-yield mechanics, "record-only / not-a-lender" in every legal doc).

14. CREDIT-BUREAU LINKAGE — THE FULL ROADMAP (*he asked about this*)

There are **three relationships**, and as a non-FI you reach only the first:

1. **PULL a score at signup (read):** achievable as a **subscriber via a negotiated commercial contract** with TASDEEQ or DataCheck — NOT a public signup. Precedent: **Karandaaz, a non-bank, signed a TASDEEQ data-sharing agreement.** → **PARTNER AGREEMENT.**
** We map TASDEEQ's 200–600 scale onto our 300–850 in code, ready for the day this signs.
2. **REPORT/furnish defaults (write):** a *non-credit-institution* furnisher needs a **Federal-Government Gazette notification** (the route utilities/telcos took) — or files **through a member partner FI.** → **BANK PARTNER** (cleaner route).
3. **eCIB (SBP's registry): closed to non-FIs entirely** — reachable only via a partner FI reporting on the circle's behalf.

What we do now with no partner: score members on our **own** data (Oraan and Money Fellows both do this — proprietary, not bureau-fed), and **accumulate the reporting queue** (every miss is CNIC-linked and queued; consent is already signed in the undertaking). Firing it needs a partner. Sources: SBP Credit Bureaus Act

2015; [SECP fintech regulation (Lexology)](<https://www.lexology.com/library/detail.aspx?g=84bbef62-a654-45f6-abd8-d0b64ef5718a>); tasdeeq.com; datacheck.com.pk.

15. LICENSING — THE FULL ROADMAP, VERIFIED (*names + links*)

Step 1 — legitimacy (we don't have this yet): register a **SECP private limited

company** ([eServices](<https://eservices.secp.gov.pk/>): name reservation → MOA/AOA

→ incorporation certificate), which **auto-integrates with FBR** for the NTN

([IRIS](<https://iris.fbr.gov.pk/>)). A private limited company + NTN is the minimum

to operate legitimately.

What we do NOT need — while record-only (the whole argument):

- **EMI licence (SBP)** — only to **issue/hold electronic money / accept public funds.** We do neither. [SBP EMI Regulations 2019](<https://www.sbp.org.pk/psd/2019/C1-Annex-A.pdf>) · [revised 2023](<https://www.sbp.org.pk/press/2023/Pr-21-Jun-2023-1.pdf>)

- **NBFC lending licence (SECP)** — only to **lend**. We don't.

- **NBFC "Investment Finance Services" licence (SECP)** — required to **pool and

invest members' funds* (*T-bills/Sukuk*). *This is exactly** the investment-layer

trigger → licensed-future only. [SECP Investment Finance Services](<https://www.secp.gov.pk/licensing/nbfc/s/investment-finance-services/>)

The pilot pathway — SECP Regulatory Sandbox: cohorts since 2020; a controlled,

time-limited live test (6–12 months) for models that don't fit existing rules; its

rules expressly allow **unregistered start-ups intending to register** to apply.

The single most valuable door Akif can open. [SECP Regulatory Sandbox](<https://www.secp.gov.pk/regulatory-sandbox/>)

Agreements we'll need (named): SECP incorporation + FBR NTN (now); TASDEEQ/

DataCheck subscriber agreement (pull); payment-aggregator/PSP agreement (real

collection); bank/EMI custody agreement; takaful partner agreement; merchant

agreements (asset committees); employer agreements (payroll deduction).

>  **Lawyer-to-confirm:** these regimes/triggers are per SECP/SBP primary sources,

> but a Pakistani corporate/banking lawyer must confirm Halqa's exact

> classification. Say this to Akif — it shows you know the limits of your analysis.

16. MARKET RESEARCH — Oraan & Money Fellows

- **Oraan (Pakistan):** women-first digital committee; 5/10-month circles;
pick-your-payout-month priced by a management fee (early = higher);
proprietary scoring (no bureau); **CNIC + 3–5 day manual human verification**
(calls, employment/family checks); **Oraan Gold** = physical ARY-certified gold in
fixed installments, **price locked at start**; SNPL education financing.
- **Money Fellows (Egypt):** ~\$1.5B processed, profitable 2025; **capital-light**
(<8% of slots need their capital); **position-priced slots** (up to ~16% on the
earliest → 0% later); **earned slot progression**; company-backed payout guarantee
(⚠ needs a balance sheet — we do NOT copy this); **prepaid card + cashback**;
employer payroll deduction; closed-loop merchant disbursal.
- **Takeaway:** proven at scale abroad, demand validated in Pakistan; Halqa's edge =
record-only, no-custody + position-based anti-default + *portable credit
record*.

16b. HEAD-TO-HEAD — Halqa vs Oraan vs Money Fellows (*the comparison table*)

Dimension	Oraan (Pakistan)	Money Fellows (Egypt)	Halqa
Money model	Holds funds (escrow, partner bank)	Holds funds (escrow, Banque Misr)	Record-only — never touches the money

Default prevention	Manual CNIC + 3–5 day human vetting; references/guarantors; family cross-liability	Position-priced slots; earned slot progression; credit assessment; salary link	Turn-position quarantine (new members → late seats only); earned graduation (2 clean circles); verification discounts; mutual PG + weekly undertaking
Default recovery	30-day cure → recall entire outstanding + legal + bureau report; withhold defaulter's & family's payouts	Company covers the gap from its own balance sheet so members never lose; blacklist on iScore	No company capital used: fast Order XXXVII civil suit → asset attachment; optional guarantee cheque → \$489-F criminal; family/linked withholding; CNIC blacklist + rehab; (future) bureau report
Credit bureau	No — proprietary scoring	Educates on iScore; proprietary underwriting	Own scoring now; bureau pull/report = partner-gated
Business model	Management fee, priced by payout month	Position/slot admin fee (~16%→0%) + prepaid-card interchange + merchant + employer B2B	Turn/service fees (minus verification discounts) + turn-marketplace fee; future merchant commission + employer SaaS
Options / products	Cash committee, Oraan Gold (price-locked), SNPL education	Cash committee, prepaid card, non-rotating savings, employer plans	Cash committee, turn marketplace; future gold + asset committees, custody, takaful
Users / scale	~10k+ savers (2021), 84% women, 170+ cities	~1M served, ~350k MAU, ~8M downloads	Prototype — pre-launch
Funding	~\$4M raised	>\$60M raised; profitable 2025 ; \$1.5B processed	Pre-seed prototype
Goal	Formalise women's committees in Pakistan	Digitise Egypt's gam'eya, expand across Africa	Formalise Pakistan's committees, record-only, scale to emerging markets
Market size	Pakistan ROSCA market ~\$5B/yr, ~41% participation	Egypt gam'eya market — large, mostly informal	Same ~\$5B/yr Pakistan market, then other emerging ROSCA markets

The one line that captures the difference (say this): *"Oraan and Money Fellows

both hold the money and recover from their own balance sheet — that needs custody, a

licence, and capital. Halqa recovers through **position and law** instead of capital

— which is exactly why we can run record-only, without a licence, today."*

16c. APIs & INTEGRATIONS — what we use now and need next

Using today (functional / sandbox):

- Internal REST API (our own Node/Express) · WhatsApp/SMS OTP rail (sandbox) · device **camera (getUserMedia)** for CNIC scan · **WebAuthn** for biometric unlock.

Need next (partner/licensed — each is a named integration to chase):

- **NADRA Verisys / Biometric Verisys** — verify a CNIC is real and belongs to the person (Pakistan's identity gold standard). Turns our "CNIC recorded" into "CNIC verified". Requires a NADRA integration agreement. (nadra.gov.pk)
- **Raast** (SBP instant-payment rail) / a **payment aggregator (PSP)** — for real auto-collection pulls instead of recorded transfers.
- **TASDEEQ / DataCheck bureau API** — pull a credit score at signup (subscriber contract) and, via a partner, report defaults.
- **WhatsApp Business API provider** — turn queued receipts/OTPs into real messages.
- **Takaful partner API** — default-cover insurance.
- **Merchant/vendor APIs** — for the future gold + asset committees (deliver the asset, not cash).

17. FUTURE ROADMAP (*all partner/licence-gated — present as the vision*)

- **Gold committee** (fixed-price, Oraan-style) — needs a gold vendor/refiner partner + Shariah sign-off.
- **Asset committee** (fixed-price solar / motorbike / plot-file / appliance, delivered by a **merchant partner** — payout becomes the *asset, not cash*, which is itself anti-default + earns merchant commission; Shariah-cleaner via Murabaha).
- **Custody + real auto-collection** (hold funds, real Raast pull) — EMI/PSP or bank.

- **Security deposits + payout hold-back** — return once custody exists.
- **Default insurance (takaful)** — takaful partner.
- **Employer payroll deduction + merchant closed-loop disbursal** — employer /

merchant partners.

- **Credit-bureau linkage** (pull + report + eCIB) — §14.

18. GLOSSARIES

Finance/fintech: ROSCA · turn/slot position as collateral · float · liquidity ·

forward liability · double-entry ledger · receivables · Murabaha / Bai' Muajjal ·

Mudarabah · Sukuk · T-bills · money-market · Bay' al-Sarf · takaful · credit scoring

/ reliability bands · KYC/CNIC · auto-debit mandate · turn pricing · collective

investment scheme · EMI · NBFC · Investment Finance Services · AMC.

CS/tech: TypeScript · React/Vite SPA · Node/Express REST · Prisma ORM ·

PostgreSQL · serverless (Vercel) · JWT + refresh rotation · bcrypt/SHA-256 · OTP ·

WebAuthn biometric · rate limiting · RBAC · idempotency keys · double-entry ledger ·

CSP/HSTS/Helmet · audit log · additive migrations · Monte-Carlo simulation · CI test

suite.

19. HONEST WEAKNESSES (*know them cold*)

- No legal entity/registration yet. No licence. No partner (by design).
- Undertaking/PG texts lawyer-unreviewed.
- Anti-default numbers are *simulation*, not live.
- Money rails (auto-collection, WhatsApp, bureau) are sandbox.
- The investment layer is the most regulatorily sensitive part — handle per §0/§15.

Your honesty about these is an asset with him. Yes boss.
