

Halqa — Business Model

24 September 2026, revision 3. Where revenue comes from, what it costs to carry a committee, how the payment rail constrains the model, and how long it takes to reach live money. Revision 3 follows the legal verification of 24 September 2026: no contribution is collected by a Request to Pay, because a Raast Request to Pay settles to the merchant that sends it, and the payment partner is an electronic money institution.

1. The three way split

Every payment a member makes resolves into its parts at the moment it is taken: the contribution, the takaful contribution where cover is attached, and the service fee. They are separately ledgered, separately reconciled and never commingled. This is the structural basis of the whole model.

Part	Destination	Owner of that money	Basis
Contribution	The collecting member, through the electronic money institution partner	The collecting member	The pot. Satisfies pot = contribution × periods
Takaful contribution	Participants risk fund at a licensed operator	The participants, collectively	Cover against default after collection
Service fee	Halqa's own revenue account	Halqa	An advance for services, which section 84 of the Companies Act excludes from the meaning of a deposit

2. Revenue

Source	Basis	Stage
Service fee	Flat per instalment, set by instalment size and roster size, identical across every seat	Now
Fill uplift	An addition where Halqa rather than the host completes a roster	Now
Rehabilitation fee	Charged where a defaulted position is restored at the member request	Now
Agency commission	From the takaful operator, at about 15 per cent of contributions	On agent registration
Distribution commission	From the asset manager on savings subscriptions	On distributor registration
Leasing origination	On asset committees, once a leasing structure exists	Later
Aggregate insight	Sold without identifying any member	Later
White label	The ledger licensed to a licensed institution	Later

What is deliberately absent: no share of any amount passing between members, no interest, no rate, no discount on a payout, no share of fund profit, and no float income because nothing is held.

Why the fee is flat

A fee graded by collection day is priced on the advance and reads as interest. It is therefore identical for every seat on the roster. Members holding later seats are compensated by Halqa in points and fee waivers issued from its own revenue, never by another member.

3. Fee grid on monthly circles

Instalment	2 to 6 members	7 to 10 members	11 or more
Up to Rs 2,500	100	100	150

Instalment	2 to 6 members	7 to 10 members	11 or more
Rs 2,501 to 5,000	100	150	200
Rs 5,001 to 10,000	150	300	500
Above Rs 10,000	200	400	500

Figures are rupees per instalment, published in the application and stated on the join sheet before any commitment. The national average instalment of Rs 6,400 falls in the third band.

Fee discounts

A member reduces the fee by reducing the risk presented. The largest applicable discount is taken and they do not stack.

Condition	Effect	Basis
Guarantee cheque held on file	80% off	Opens a route under section 489-F of the Penal Code
Income slip and employer verified	50% off	Certain and traceable income
Salary account linked	Mandatory	Required on any roster of members who are strangers. Not a discount

4. Cost of one committee for one year

Reference case: 12 members, Rs 2,500 each, collected monthly, run for one year.

Line	Basis	Amount
Instalments collected	12 members over 12 rounds	144
Messaging	2.3 sends per payment	in the per payment figure
Identity	Rs 200 per member, amortised	in the per payment figure
Support	1 contact per 20 payments at Rs 150	in the per payment figure
Compute and storage	Rs 25 per member per year	in the per payment figure

Line	Basis	Amount
Cost per payment, all in, excluding rail		Rs 12.60
Total operating cost for the year		Rs 1,815
Fee revenue at the Rs 100 band		Rs 14,400
Contribution before rail		Rs 12,585

Rs 100 per instalment is the point at which an open circle covers its own operating cost. Every band above that carries margin.

5. The rail, and why it decides the collection tier

The fee is flat and the rail is a percentage, so the ratio between them worsens as the instalment grows. This is the binding constraint on the model.

Product	Instalment	Rail at 1.5%	Fee	Rail as a share of the fee
Hyper, Option 1	Rs 450	Rs 6.75	Rs 75	9%
Hyper, Option 2	Rs 500	Rs 7.50	Rs 83.33	9%
Monthly circle	Rs 2,500	Rs 37.50	Rs 100	38%
Monthly circle	Rs 5,000	Rs 75	Rs 150	50%
Monthly circle	Rs 20,000	Rs 300	Rs 500	60%

Card at 3.3 per cent plus Rs 33 would take 64 per cent of hyper fee revenue and is never offered on instalments.

The collection ladder

Tier	Mechanism	Member action	Cost	Used on
1	Payment initiation by the electronic money institution	One approval inside the Halqa application	The partner's rate, to be agreed	Default on every monthly circle

Tier	Mechanism	Member action	Cost	Used on
	partner, over Raast where available			
2	Token mandate held by the partner	None after the first authorisation	about 1.5%	Hyper, where a daily prompt is impractical
3	The member sends over Raast to the collector's Raast ID	Member initiates	nil	Always available
Fee	Raast Request to Pay sent by Halqa, the payee of its own fee	One approval	nil at present	Halqa's fee only

Halqa never sends a Request to Pay for a contribution. A Raast Request to Pay settles to the merchant that sends it, so a contribution collected that way would land in Halqa's account, which is the acceptance of a deposit under section 84(1) of the Companies Act 2017. Two responses to the rail cost, not exclusive: agree a per-transaction price for the partner's initiation on monthly circles, and establish with the partner whether its charge can be passed to the payer.

6. Hyper economics

Line	Option 1	Option 2
Roster, cycle, collecting daily	400, 50 days, 8	390, 26 active days, 15
Daily payment	Rs 450	Rs 500
Contribution, takaful, fee	300 / 75 / 75	333.33 / 83.33 / 83.33
Pot	Rs 15,000	Rs 8,666.67
Cycle value	Rs 6,000,000	Rs 3,380,000
Fee revenue per cycle	Rs 1,500,000	Rs 845,000
Agency commission at 15%	Rs 225,000	Rs 126,750

Line	Option 1	Option 2
Gross revenue	Rs 1,725,000	Rs 971,750
Rail at 1.5%	(Rs 135,000)	(Rs 76,050)
Operating cost at Rs 12.60 per payment	(Rs 252,000)	(Rs 127,764)
Net per cycle	Rs 1,338,000	Rs 767,936

The default loss falls on the takaful risk fund rather than on Halqa, so the net figure is not reduced by it. The risk fund built over one cycle is Rs 1,500,000 on Option 1, sized for a 50 per cent post collection default rate.

7. Cost at three sizes

Stage	Monthly cost	Cost per member
Bare platform before launch	Rs 14,000	not meaningful
Platform with recovery, monitoring and support tooling	Rs 58,000	not meaningful
100,000 members	Rs 1,304,000	Rs 13
10,000,000 members	Rs 110,000,000	Rs 11

At 100,000 members, Rs 614,000 is platform and usage and Rs 690,000 is people. People are the larger half and the one that does not fall automatically with volume, which is why support contacts per payment is the figure to watch.

8. Points and waivers

Item	Detail
Purpose	Compensation issued by Halqa to members holding later seats, in place of any payment from other members

Item	Detail
Funded by	The service fee. Booked as a liability at the moment of issue
Redemption against fees	Applied automatically at the next charge, with the reduction shown on the receipt
Redemption with a commerce partner	Redeemed against goods, which converts an internal credit into value the member can use
Candidate partners	Daraz, foodpanda, Careem
Commercial basis	Halqa purchases value from the partner at a negotiated discount, so the cost per point is known before it is issued
Why it matters	It replaces the early fee that members once paid one another

9. Launch timeline

Step	Days	Notes
SECP incorporation	2 to 5	Start immediately
National Tax Number	1 to 2	Automatic after incorporation
Provincial sales tax	3 to 5	Parallel
Company bank account	7 to 14	Long pole in registration
Partner application	1	Requires certificate, tax number and bank account
Partner approval	14 to 21	The largest unknown. Send the enquiry before incorporating
Partner's notice to the State Bank	0 to 30	Para 7.I(h) of the EMI Regulations 2023: 30 days before the partner first offers its interface services, unless already given

Step	Days	Notes
Integration and live credentials	5 to 10	Overlaps approval
Standard circles live	30 to 45, or up to 75	30 best case, 45 realistic, 75 if the partner's notice starts only when Halqa signs
Corporate insurance agent registration	28 to 56	Cannot start before the company exists
Hyper live, once cover is in place	75 to 90	Hyper without cover would put default risk on the balance sheet

Engineering is not the constraint. The route C restructure, the live rail adapter, the mandate lifecycle, reconciliation and the blocking platform gaps together run about three weeks, inside the registration path.

10. Market position

Observation	Consequence
Committees are already universal and run on paper	The product replaces an existing behaviour rather than creating one
The filter is regularity of income, not level of income	The addressable base is wider than a lending product and does not sit at the bottom of the income distribution
21 digitisation attempts studied, 4 succeed	The failure modes are documented and each is designed against
A wallet launched a committee product on 13 August 2026	The category is proven and contested at the same time
That product holds the pot in an administrator wallet	It carries custody risk that Halqa does not
It sets the order by administrator choice and permits no exit	Order by rule and a published exit path are the two clearest differences

11. Counterparties

None is contracted at this date. Each is named as the intended or candidate counterparty for that function.

Function	Counterparty
Identity verification	NADRA, through a corporate Verisys agreement
Credit bureau	TASDEEQ, with DataCheck as the alternate
Instant payment rail	Raast, operated by the State Bank of Pakistan
Wallet rails	JazzCash and Easypaisa
Interbank switch	1LINK
Electronic money institution	NayaPay or SadaPay, to be confirmed against the State Bank register
Payment aggregator	PayFast or Safepay, for Halqa's own fee only
Takaful operator	Pak-Qatar Family Takaful or Salaam Takaful
Trustee	Central Depository Company of Pakistan
Asset manager	Mahaana Wealth
Messaging	WhatsApp Business Platform
Points redemption	Daraz, foodpanda or Careem
Infrastructure	Vercel for hosting, Supabase for the database, Cloudflare at the edge

12. Assumptions

Assumption	Value
Currency	Rs 280 to the United States dollar
Messaging	2.3 sends per payment

Assumption	Value
Support	1 contact per 20 payments at Rs 150
Identity	Rs 200 per member, once
Compute and storage	Rs 25 per member per year
National average instalment	Rs 6,400
Rail	1.5 per cent on a token mandate, to be confirmed with the partner; nil on Raast
Agency commission	15 per cent of takaful contributions
Post collection default rate priced for	50 per cent
